Want to get out more? Join us for day-long naturalist lead expeditions to explore the wildlife, ecology, and natural history of our coastal habitats. Each class will be a mixture of lecture, investigation and field activities that will introduce you to naturalist skills and research methods.

APRIL 9: INVESTIGATE INVERTEBRATES
Discover the world of the six legged animals that make up more than half of all living things in this planet and are an integral part of our ecosystem. This class will cover collection methods, identification and mounting of insects.

APRIL 30: SPRING SWAMP WALK
Bring your hip boots or old sneakers and wade through the swamps of Hobcaw Barony as spring blooms. Learn about the history and ecology of coastal swamps, and practice tree and wildflower identification skills on this excursion.

MAY 28: ESTUARY IMMERSION
Salt marshes, tidal creeks, and plenty of pluff mud will be experienced during this North Inlet immersion. Topics covered will include estuarine plant, invertebrate, and fish identification, and understanding the tides. We will also discuss coastal environmental issues and conservation.

JUNE 11: AT THE BEACH
Join us at Huntington Beach State Park to explore the wildlife of the sand and surf. Use suction samplers and seine nets to discover beach life you never knew was there, and learn about the varied marsh and beach habitats of the park.

Classes meet from 9 AM to 4 PM.
The registration fee of $20/class covers course materials and entrance fees.

Registration is limited. To register, please visit www.northinlet.sc.edu or call 843-904-9033
